

A Proposal for an Economics of Goodwill Proclamation

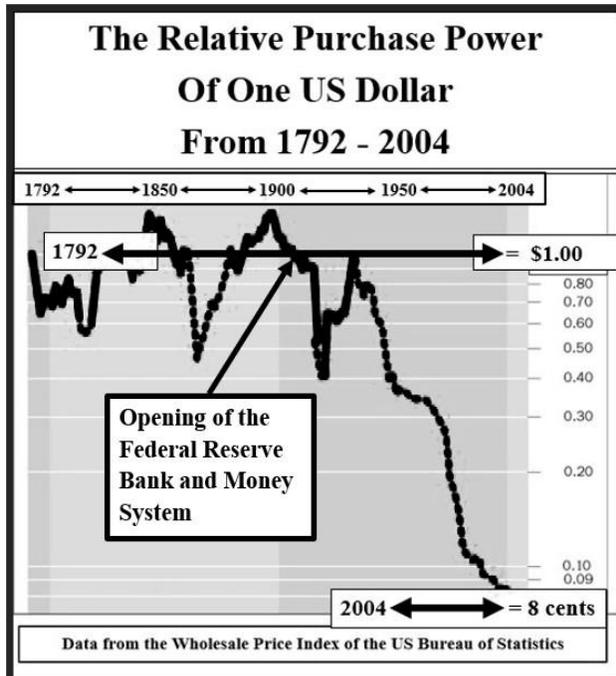

The Proposal for an Economics of Goodwill Proclamation paints a picture of what is to be accomplished but does not provide any specific legislation as these documents must be crafted by those who draft the executive orders to implement the Proposal in any particular nation.

As written, the proposed Economics of Goodwill Proclamation is intended to be announced by President Trump, or the next president of the USA, with a speech given to a joint session of Congress, broadcast live to a General Assembly of the United Nations and live on YouTube.

“We live in a world of vast inter-connected infrastructure, and our combined infrastructure is the foundation for our local, national, and international economies.

The basis of The Economics of Goodwill Proclamation is to have all the benefits and profits of all local and national infrastructure returned to the taxpayers and citizens of every nation.

One of the hidden places where national infrastructure profits have been taken for personal use is in the central banks and fractional reserve money systems of the world.

And the Federal Reserve bank and money system in the USA has never provided the necessary foundation for our shared prosperity.

This graph shows that beginning in 1792 until 2004, there has been a 92% overall loss in the purchase power and value of the US Dollar.

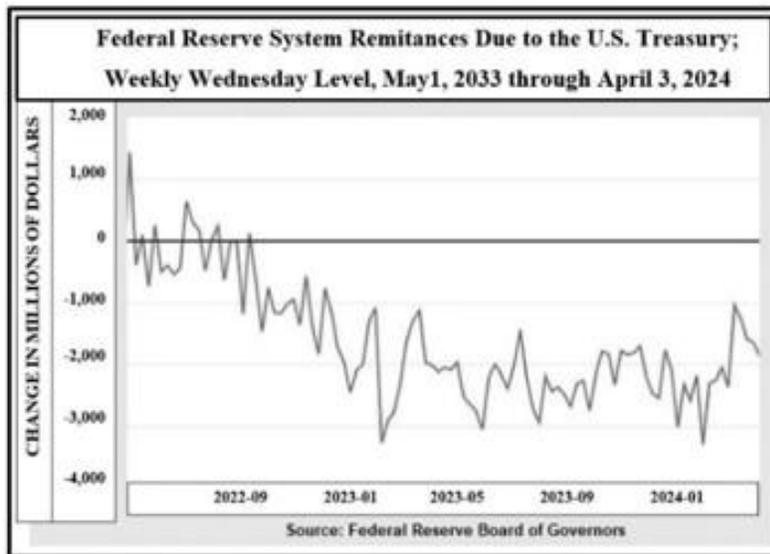

This means that in 1792 eight cents could buy a set of items that cost one dollar in 2004.

The value of our money does not evaporate into thin air.

The people who operate Federal Reserve System banks use taxpayer supported national infrastructure to quietly extract the value of our money and transfer that value into large salaries, profits, bonuses, and stockholder dividends for people within the Federal Reserve System.

Money was invented to represent stored value, however today, most forms of modern money represent debt to a person who is a banker, and our debts are constantly increasing.

As our money loses value and our debts increase, we become money crazy, and in our money crazy state of mind we destroy resources and start wars.

This second graph shows that beginning in 2008, the people of the corporate banks of the Federal Reserve System have found ways to extract all of the profits of the national money system infrastructure of the USA for personal income, bonuses, and payments to stockholders while leaving the taxpayers of the USA in debt to the people who own and operate the corporate banks of the Federal Reserve System.

Altogether, the evidence indicates that from 1914 until 2004, less than 20% of all profits from the Federal Reserve bank and fractional reserve money system have ever been returned to the US Treasury, and beginning in 2008, none of the profits of the national money system infrastructure of the USA are being returned to the US Treasury.

I am sad to report this sort of bank and money system is in use in every nation on Earth right now, and this is contributing to a system of debt-money and endless conflicts.

However, I want to make it absolutely clear that the people who work at the government operated Federal Reserve offices and in the Federal Reserve System corporate district banks and corporate member banks are not to blame for our current situation.

I have discovered that the people who are the bankers of the USA, and people who are the bankers of the world, have inherited a bank and money system that operates on hidden equations that have produced debt-based money, the age of war, our destructive global economy, and global warming.

Additionally, the people at various government and private banks, and international organizations, like the banks of the Federal Reserve, as well as the World Bank, the International Monetary Fund, and the World Trade Organization dominate others by the methods of debt-trap diplomacy.

The purpose of debt-trap diplomacy is to loan money to obligate others to remove various laws that protect natural resources and limit national or international trade.

The deliberate removal of local, state, national, and international laws that once protected trade and cultural traditions, and the widespread use of debt-trap diplomacy, has contributed to the creation of our destructive global economy, and global warming.

Today I will be signing an executive order known as The Economics of Goodwill Proclamation.

To maximize the usefulness of our national money system infrastructure, and to begin to regain the stored value of our money, Bitcoin and all other digital money systems or privately printed currency money will be outlawed as competition to the national money system infrastructure of the USA.

And there is confusion as to the supposed non-profit, tax-exempt aspect of the Federal Reserve money system.

The Federal Reserve website reports the Federal Reserve bank and money system is a unique non-profit, mostly tax-exempt entity within the US government.

And the people who are the bankers of the Federal Reserve money system are supposed to return money system profits to the US Treasury at the end of each year.

And except for the corporate banks of the Federal Reserve System, all other non-profit, tax-exempt corporations in the USA are registered under specific guidelines with the Internal Revenue Service, and every corporation is created under law, and every corporation can cease to exist under law.

Therefore, as the first step in The Economics of Goodwill Proclamation, every corporation of any kind within the national infrastructure of the banks of the Federal Reserve System or any other financial institution in the USA that uses Federal Reserve Notes and then creates money credits within the national Federal Reserve fractional reserve money system will have their incorporation papers revoked by the US government's Office of the Comptroller of the Currency.

These corporations will be given a 30-day period to apply with the Internal Revenue Service and the Office of the Comptroller of the Currency for new non-profit status.

The new Internal Revenue Service forms will be called *The National Bank and Money Infrastructure Non-profit Corporation Authorization*.

The purpose in updating our national money system is to return to a world where money represents stored value and provide funding to modernize and rebuild national infrastructure to reduce pollution, increase self-sufficiency to reverse global warming, and provide an economic foundation for the new economy of Sustainable Prosperity.

The infrastructure of the USA is primarily paid for and maintained by states and local governments.

Only the largest infrastructure projects are financed with federal monies.

Therefore, after registering with the Internal Revenue Service as a *National Bank and Money Infrastructure Non-profit Corporation*, all institutions using Federal Reserve Notes and the fractional reserve system to produce money credits will return all profits to specific accounts.

For example, profits from national banks will be sent to the US Treasury, and profits from state banks will be sent to state treasuries.

The Bank of North Dakota is an excellent example of a state bank that returns all profits to the state treasury, while providing low-cost education loans and other low-cost loans to the residents of North Dakota.

The Bank of North Dakota is an excellent model to establish citizen-owned state banks in the USA and elsewhere.

And therefore, with this update a greater portion of the profits of the national money system will be paid to the states.

This is important because state authorities have the ability to maximize the usefulness of local resources, and understand the local processes needed to modernize and rebuild each state's infrastructure.

Profits from savings and loans or builder's thrifts will remain with savings and loans to provide low cost, highly accountable, locally financed mortgages, and construction loans.

Profits from local credit unions will remain with credit unions for low-cost loans on domestic purchases, like cars, home improvement loans to increase energy efficiency, educations, and loans to local businesses within the local area.

And there are new guidelines for the people who work within the banks of the Federal Reserve system.

For example, all administrators and employees at all corporations or institutions using Federal Reserve Notes and the Federal Reserve fractional reserve system to produce money credits will be paid at the same scale, receive the same benefits, and the same level of bonuses as those who hold similar positions within the government offices of the Federal Reserve.

Stockholders in all Federal Reserve System member or district banks, or other financial institutions using the Federal Reserve fractional reserve money system will continue to receive a 6% dividend on stock as required by the Federal Reserve Act, but none of the profits will be paid to stockholders, employees, or administrators of any corporation or institution using Federal Reserve Notes and the Federal Reserve fractional reserve money system.

And there is the special issue of Banker's Acceptances.

Banker's Acceptances use the money from the checking accounts of bank customers to finance national and international trade.

And Banker's Acceptances have become cash substitutes and debt instruments of the daily money market.

Under the Federal Reserve Act Banker's Acceptances were first used to finance specific sorts of trade, and at first, all profits from Banker's Acceptances were returned to the US Treasury.

Today, selling, and reselling Banker's Acceptances fuels the profit-taking frenzy of the daily money market to finance any sort of trade, and none of the profits from Banker's Acceptances are being returned to the US Treasury.

Therefore, to reduce the moral hazard of controlling and using other people's money, at the end of each business day the people within the bank and money infrastructure of the USA must provide an online list of all Banker's Acceptances in process, and the purpose of the transaction.

Additionally, Banker's Acceptances are not to be resold, Banker's Acceptances must be held at the bank financing the Banker's Acceptance until completion of the transaction.

All Banker's Acceptances must show whose money was put at risk, for what purpose, and confirm all profits are returned to the US Treasury at the completion of each Banker's Acceptance.

For example, the family farmers who put their money in the banks of Iowa will want to see the sort of Banker's Acceptances that are supportive of sustainable family farms.

And the manufacturers of Michigan will want to see the sort of Banker's Acceptances that are supportive of sustainable manufacturing in Michigan and elsewhere in the USA.

The idea is full, open, online accountability in the use of Banker's Acceptances, and this is intended as a model for other nations to adopt.

If various banking corporations do not want to update as *National Bank and Money Infrastructure Non-profit Corporations*, then all stock must be sold, and all offices closed within 30 days as required by the Federal Reserve Act regarding non-member banks.

It is important that during these changes to update our national infrastructure that we do not make anyone who works as a banker or within a bank into any kind of criminal.

No one alive invented our existing bank and money system.

And everyone has their instructions on how to do a good job at work.

New instructions to do a new kind of better job at the banks of the world, thereby maximizing the usefulness of national and international money systems, will result in providing new financial support to rebuild national infrastructure to minimize pollution and maximize self-sufficiency in every nation on Earth.

And every Federal Reserve Note states, 'In God We Trust', but whose god are we supposed to trust?

Humankind has created hundreds of millions of gods.

Therefore, as a part of The Economics of Goodwill Proclamation, the god we are to trust on every Federal Reserve Note is now the essence of the god of goodwill that resides in every person on Earth.

And The Economics of Goodwill Proclamation requires the skills of goodwill to be taught in every school in the USA from pre-school to graduate school.

And from first grade through graduate school all students will be taught the logic and social skills of Critical Path Thinking to encourage a smooth and efficient transition into the age of goodwill and shared prosperity.

And as a function of The Economics of Goodwill Proclamation, I ask the leaders of every nation to implement similar national infrastructure acts to maximize national prosperity, increase goodwill, and reduce conflict.

And we must provide necessary food supplies to disaster areas.

No one wants to watch their children die from starvation or hunger related disease.

And therefore, as a part of The Economics of Goodwill Proclamation, I call upon the people of the United Nations to have all profits from the World Bank and the International

Monetary Fund returned to the United Nations to buy food for people who need food now, and during the natural disasters that will occur as we reverse global warming.

And I ask the people at the United Nations to redirect the actions of the people who work at the World Trade Organization to re-instate all trade laws that once protected the cultures and resources of the nations of the world.

As president of the USA, I am in a position of public trust.

To best protect the public trust, and encourage the prosperity of our nation, and the prosperity of every nation, to proclaim the end of the age of war, and to encourage the international transition into the age of goodwill, on this day, in an act of international goodwill, and before a joint session of the Congress of the USA, with all the world as my witness, I will now sign The Economics of Goodwill Proclamation.”

This is the end of the proposed presidential announcement of the Economics of Goodwill Proclamation.
